information retrieval, freeing up time for more enjoyable activities.

**Building Trust in Technology**

Starting small is a great approach. For example, you can begin by using a voice assistant like Siri or Alexa. Just ask it simple questions like, What's the weather today? or Set a timer for 10 minutes. You'll notice that it responds quickly and accurately, making everyday tasks a bit easier. As you interact more, you'll start to appreciate how these tools can assist you, reducing any apprehensions you might have about technology. Consider exploring easy smartphone apps as well. Many of these apps are user-friendly and designed for seniors, helping with everything from medication reminders to organizing photos. By taking these small steps, you not only become familiar with technology but also build confidence in your abilities to navigate it.

Once you begin to feel comfortable interacting with technology, you'll start to notice its benefits in various areas. For instance, you might use AI in the form of recipe suggestion apps, which can help you plan meals based on ingredients you already have at home. This can be helpful both with budgeting and reducing food waste. Additionally, many people find joy in using platforms like Facebook or Zoom to stay connected with family and friends, especially those who live far away. Seeing how technology like this enhances your social life can create a sense of trust and acceptance. As you rely on AI to simplify daily
